$V_{RMS}$  – Maximum AC operating voltage the varistor can maintain and not exceed  $10\mu A$  leakage current

$V_{DC}$  – Maximum DC operating voltage the varistor can maintain and not exceed  $10\mu A$  leakage current

$V_V$  – Voltage across the device measured at 1mA DC current.  
Equivalent to  $V_b$ , "Breakdown Voltage".

$C_p$  – Device capacitance measured with zero volt bias  $1V_{rms}$  at 1MHz.

$V_C$  – Maximum peak voltage across the varistor measured at 8/20 $\mu s$  waveform and 1A pulse current

$i_{max}$  – Maximum peak current which may be applied with 8/20 $\mu s$  waveform without device failure

$W_{max}$  – Maximum energy that may be dissipated with the 10/1000 $\mu s$  waveform without device failure.

## Precautions for Handling

### Solder cream in reflow soldering

Refer to the recommendable land pattern as printing mask pattern for solder cream.

- (1) Print solder in a thickness of 150 to 200  $\mu\text{m}$ .
- (2) Dimensions: millimeters (inches)

### Precaution for handling of substrate

Do not exceed to bend the board after soldering this product extremely.

(Reference examples)

- Mounting place must be as far as possible from the position, which is close to the break line of board, or on the line of large holes of board.
- Do not bend extremely the board, in mounting another component.  
If necessary, use back-up pin (support pin) to prevent from bending extremely.
- Do not break the board by hand. We recommend using the machine or the jig to break it.

### Precaution for soldering

Note that rapid heating, rapid cooling or local heating will easily damage this product.

Do not give heat shock over 100°C in the process of soldering. We recommend taking preheating and gradual cooling.

## Recommendable reflow soldering
